

### Higher for Longer

There has been much discussion about the aberration of the low interest rate period that prevailed throughout much of the period following the Great Financial Crisis (GFC) through 2022, when the U.S. Federal Reserve (the Fed) began loosening monetary policy. A glance at Figure 1 shows that today's Fed Funds Effective Rate of 5.33% is much more normal and consistent with its long-term average of 4.76%.

For options-based strategies, the beneficial impact of higher interest rates is felt in the pricing of both index call and index put options. As seen in Figure 2, when the one-month T-Bill rate is 0.25%, as it was for such an extended period, the premium that investors receive for writing a one-month at-the-money (ATM) S&P 500® Index call option was around 2.25%. That same call option today is generating nearly 2.50%. If the Fed does not return to a zero-interest rate policy, which seems unlikely any time soon, the interest rate component of index option writing strategies can persistently and positively contribute to return moving forward.

**Figure 2: One-Month T-Bill Rate Impact on One-Month ATM Call Premium**

The positive correlation of index call option premium with interest rates also offers investors the possibility to offset negative interest rate risks that are typically associated with fixed income investments. This offers investors a liquid and transparent alternative that can complement their allocations to bonds.

Finally, as demonstrated in *Protection for Less*, higher short-term interest rates (all other factors equal) results in a lower cost of protection through the purchase of index put options – which declined in price dramatically in 2023. As Figure 3 shows, the cost of a three-month 10% out-of-the-money (OTM) S&P 500® Index put option is at some of the lowest levels since January 2004. In fact, as of the end of the first quarter of 2024, the cost of such protection was just 0.38%, ranking in the 9th percentile and well below the January 2004 to March 2024 average of 1.15%.

**Figure 3: Cost of Protection Near Multi-Decade Lows**  
10% OTM Index Put Option Premium | January 2004 to March 2024

## Looking Into Results

[Expectations vs. Reality](#), published in January 2024, explored the impact of higher interest rates on performance in light of 2023 being the best year in 25 years for the [Gateway Index/RA](#) composite (Index/RA) and the best year for [Gateway's Active Index-Option Overwrite](#) (AIOO) composite since its 2008 inception.

The beneficial impact of higher interest rates can be seen further in ranking rolling 12-month returns by the level of interest rates. Given its longer track record, beginning January 1, 1988, consider the results for Index/RA:

- After ranking rolling 12-month returns by level of interest rates, median upside and downside capture ratios are drastically different when compared to periods with rates over 3% versus under 3%.
- The rolling 12-month median **upside capture ratio was 66% higher during** periods with short-term interest rates 3% or greater compared to periods with rates less than 3%, when the median upside capture was 39.7%.
- Downside capture was even more impressive. With rates 3% or greater, the 12-month rolling median **downside capture is nearly zero** compared to 31.7% when rates are under 3%.

### Index/RA Rolling 12-Month S&P 500® Index Median Capture By Interest Rate Level | January 1988 to March 2024

	Upside Capture	Downside Capture
Rates Over 3%	66.0%	0.1%
Rates Under 3%	39.7%	31.7%

Source: Bloomberg, L.P.

Gateway avoids the crystal ball, but history suggests that interest rates are now in a more typical range and much closer to historical averages than compared to levels experienced during quantitative easing. For options-based strategies, this has been a game changer in terms of improved performance and capture ratios – setting the stage for an exciting future. These strategies, such as those managed by Gateway, offer investors a straightforward alternative and a compelling complement to both equity and bond allocations.

Standard Performance Table						
Performance	1 Year	3 Years	5 Years	10 Years	Index/RA Inception*	AIOO Inception*
Index/RA Composite (Net)	15.02	4.93	6.30	5.32	6.93	
AIOO Composite (Net)	20.02	8.37	9.77	8.33		7.50
S&P 500® Index	29.88	11.49	15.05	12.96	11.15	11.20

# Gateway Index/RA Composite Disclosure

---

Gateway Investment Advisers, LLC (Gateway) is an independent registered adviser and a successor in interest to Gateway Investment Advisers, L.P. as of February 15, 2008. Performance information for the Gateway Index/RA Composite (the Composite) shown in this illustration is an asset-weighted composite of discretionary accounts under Gateway's management which share the same investment objectives and hedging strategies.

The Composite was created in January 1993. Prior to January 1, 1993, not all fully discretionary portfolios were represented in composites. Results shown for 1988 through 1992 are those of one representative account.

The Composite net of fee performance results reflect the reinvestment of dividends and other earnings and reflect the deduction of investment advisory fees.

The effectiveness of Gateway's strategy might be reduced if the portfolio doesn't correlate to the performance of the index underlying its option positions. Rebalancing of a portfolio may involve tax consequences.

Selling index call options can reduce the risk of owning stocks but limits the opportunity to profit from an increase in the market value of stocks in exchange for up-front cash at the time of selling the call option. Unusual market conditions or the lack of a ready market for any particular option at a specific time may reduce the effectiveness of the Composite's option strategy, and for these and other reasons the Composite's option strategy may not reduce the volatility to the extent desired.

Past performance is no guarantee of future results. A more detailed description of Gateway's standardized fees is included in Form ADV, Part 2.

The GIPS® Composite Report for the Gateway Index/RA Composite is included with this document. Additional copies are available upon request by calling 513.719.1100.

N/A: The gross three-year annualized ex-post standard deviation of the Composite and benchmarks is not presented as 36-month returns are not available.

**Gateway Index/RA Composite** contains fully discretionary hedged equity accounts which hold common stock and sell index call options on at least 95% of the underlying stock value. This call activity reduces volatility and provides cash flow. The accounts typically buy index put options that can protect the Composite from a significant market decline that may occur over a short period of time. Indexes utilized for call and put option activity are U. S. domestic equity indexes that include all sectors of the economy. The creation and inception date of the Gateway Index/RA Composite was January 1, 1993. As of June 1, 2009, the Composite definition was refined to more accurately reflect the criteria used to determine membership. No membership changes resulted from the revision.

For comparison purposes the Gateway Index/RA Composite is measured against two indexes, the S&P 500® Index (a popular indicator of the performance of the large capitalization sector of the U. S. stock market) and the Bloomberg U. S. Aggregate Bond Index (an unmanaged index of investment-grade bonds with one- to ten-year maturities issued by the U. S. government, its agencies and U. S. corporations).

Performance results are based on fully discretionary accounts under management, including accounts that may no longer be with the firm, and are expressed in U.S. dollars.

Performance returns are presented gross and net of management fees and include the reinvestment of all income. Past performance is not indicative of future results. The annual Composite dispersion presented is an asset-weighted standard deviation calculated using gross returns for the accounts in the Composite the entire year. The 3-year standard deviation is calculated using gross returns. Net of fee performance was calculated using actual management fees. The current investment management fee schedule is as follows: 0.85% on the first \$5 million; 0.65% on the next \$5 million; 0.50% on the next \$40 million; and 0.30% on assets in excess of \$50 million. Actual investment management fees incurred by composite accounts may vary.

Gateway Investment Advisers, LLC (Gateway) is an independent registered investment adviser and a successor in interest to Gateway Investment Advisers, L.P. as of February 15, 2008. Gateway claims compliance with the Global investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. Gateway has been independently verified for the periods January 1, 1993 through December 31, 2023. A firm that claims compliance with the GIPS® standards must establish policies and procedures for complying with all the applicable requirements of the GIPS® standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS® standards and have been implemented on a firm-wide basis. The Gateway Index/RA Composite has had a performance examination for the periods January 1, 1993 through December 31, 2023. The verification and performance examination reports are available upon request.

# Gateway Active Index-Option Overwrite Composite Disclosure

---

Gateway Investment Advisers, LLC (Gateway) is an independent registered adviser and a successor in interest to Gateway Investment Advisers, L.P. as of February 15, 2008. Performance information for Gateway Active Index-Option Overwrite Composite (the Composite) shown in this illustration is an asset-weighted composite of discretionary accounts under Gateway's management which share the same investment objectives and hedging strategies.

The Composite was created on April 1, 2008.

The Composite's net of fee performance results reflect the reinvestment of dividends and other earnings and reflect the deduction of investment advisory fees.

The effectiveness of Gateway's strategy might be reduced if the portfolio does not correlate to the performance of the index underlying its option positions. Rebalancing of a portfolio may involve tax consequences.

Selling index call options can reduce the risk of owning stocks but limits the opportunity to profit from an increase in the market value of stocks in exchange for up-front cash at the time of selling the call option. Unusual market conditions or the lack of a ready market for any particular option at a specific time may reduce the effectiveness of the Composite's option strategy, and for these and other reasons the Composite's option strategy may not reduce the volatility to the extent desired.

Past performance is no guarantee of future results. A more detailed description of Gateway's standardized fees is included in Form ADV, Part 2.

The GIPS® Composite Report for the Gateway Active Index-Option Overwrite Composite is included with this document. Additional copies are available upon request by calling 513.719.1100.
